# DIRECTOR'S REMARKS

---

The 2024 CSU Trials recently wrapped up for the season. We had significant color extending all the way into the end of October. The 2024 summer was a bit more normal, compared to 2023, in that, we had a considerably drier summer and warmer temperatures on average, especially in June, with the thermostat being turned up quickly! This translated into a couple periods of increased irrigation frequency, to assist with establishing the plantings. For much of the summer, the Fort Collins area was under abnormally dry to moderate drought conditions, and we are currently in extreme drought conditions. Japanese beetles continue to be one of our major pest problems.

We had 23 companies participate in this season's trials, with a total of 960 entries planted in containers and/or ground beds, and in sun and/or shade conditions. There were many great plants this summer—making for a difficult task choosing winners!

The 29th Annual Evaluation Day was held on Tuesday, August 6th, as a part of the Colorado Destination Days (<https://agsci.colostate.edu/hortla/colorado-destination-days/>). We had a great turn out, of an estimated 250 industry and horticulture professionals to assist with evaluations. We also encourage visitors throughout the summer to vote for their favorite plants.

You are cordially invited to visit the gardens at your leisure and enjoy the color and ambiance of a place that is like no other in Colorado. Please feel free to contact us with your feedback.

# TRIAL GARDEN MISSION AND PURPOSE

---

Our mission is to provide education, research and outreach to students, community members, industry professionals and anyone else with a desire to learn.

The purpose of the flower trial garden is to evaluate the performance of flower varieties under our unique Rocky Mountain environmental conditions. Our growing conditions are characterized by high altitude, intense solar radiation, drying winds, severe hailstorms, large fluctuations between day and night temperatures, season-long need for irrigation and heavy clay soils. Plants are evaluated based on plant vigor, uniformity, floriferousness and tolerance to environmental and biotic stresses. Performances of these varieties are judged by selected students, faculty, industry representatives, public horticulturalists and advanced Master Gardeners. A summary of these evaluations will be published in a Garden Performance Report at the end of the season so that the information can be put to use by the horticulture industry, as well as the public. The report will be distributed at the end of the season to all participating companies. The trial results will also be available to the public online at [www.flowertrials.colostate.edu](http://www.flowertrials.colostate.edu).

## GARDEN BEDS AND CONTAINERS

### Soil Preparation and Amendments

- Beds raked clean of old plant material and weeds
- Grower's Mix Media (Organix Supply, Inc.) was added to some sun beds to level.
- All beds tilled to 8" and crowned to assist with drainage.
- Containers were filled and/or top 4-6" media replaced with Grower's Mix Media.

### Irrigation

- Immediately hand-watered after transplant.
- Planting beds watered based on one of three rates:
  - Low = 0.5" for beds A, H, I, M, N
  - Medium = 1.0" for beds E, F, J, SA, SB, SC
  - High = 1.5" for beds C, D, G, K, L
- Ground beds typically watered between 2 and 3 times per week
- Containers watered 3 times per week for the first two weeks after transplant; then 2 times per week
- Container irrigation was supplied using two 1 gph drip emitters for 30 minute (shade) and 45 minute (sun) cycles.
- Irrigation was adjusted reduced based on rain events or increased based on increased high temperatures.

Containers in the University Center for the Arts were planted with **All-American Selections** and combination plantings, designed by the summer crew.

# PLANT EVALUATION

---

## Data Collection and Methods

**Ground bed:** A representative plant from 15 replicates was selected for data collection.

**Containers:** The container as a whole (all replicates planted in the container) was used for data collection.

**Data Collections:** July 10 and August 18

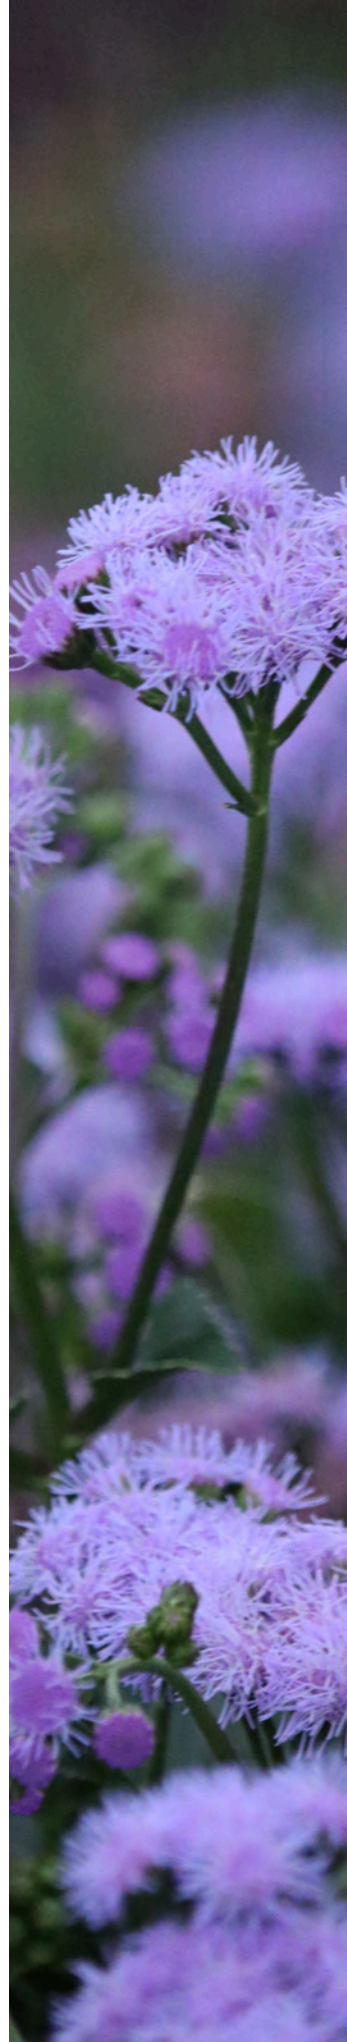

- **Plant Height:** measured from ground to tallest part of plant.
- **Plant Width:** two measurements averaged from one measurement of widest and one perpendicular to the first measurement.

\*\*Vining or trailing plants in containers were noted as appropriate for container evaluations.\*\*

## Flowering Performance

**Data Collections:** Regular basis; every 14 to 21 days

- Data presented reflects average of all surviving plants
- Flowering data ratings based on the following scale
  - 1 = plants not in bloom (0%)
  - 2 = a few flowers present across the planting
  - 3 = significant amount of flowers present (~50%)
  - 4 = mostly in flower across planting (~75%)
  - 5 = plants in full/peak bloom (~100%)

# PLANT EVALUATION

---

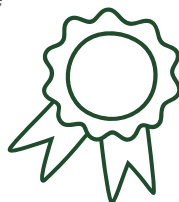

## Industry Evaluation Day: August 6, 2024

- A total of 249 horticulture industry professionals, trial garden employees, advisory members, university affiliates, and Master Gardeners evaluated entries.
- Evaluators were assigned to rate about ~100 entries
- Evaluation data collected digitally (~45 used paper evaluations)
- Each evaluator provided ratings based on the following criteria:
  - **Overall Rating** (1 = very poor performance; 5 = excellent)
  - **Plant form and quality** including *vigor, uniformity, foliage health, branching, sturdiness, etc.*
  - **Flowering** including *size, uniformity, flower presentation, flowering capacity, color stability, color balance in mixed plantings, etc.*
  - Other considerations including *fragrance (flowers or foliage), disease/pest damage, novelty, etc.*

## "Best Of" Winners & "Other Outstanding Plants" Selection

- Ratings from all evaluators on August 6th field day were averaged
- Top five in each class (class was designated by having at least 10 entries for the genus or type of plant species) were identified
- Subcommittee of Trial Advisory Board and University representatives met on September 13 to review the top five and verify the top rated entries in selecting the **"Best Of"** winners.
- **"Best of Show"** was selected from one of the class winners
- **"Other Outstanding Plants"** were selected based on committee review and plant performance
