DIRECTOR'S REMARKS

The 2025 CSU Trials are all wrapped up. We had 23 companies participate in this season's trials, with over a 1,000 entries planted in containers and/or ground beds, and in sun and/or shade conditions. There were many great plants this summer—making for a difficult task choosing winners!

The 2025 summer was warm and drier in July. This translated into a couple periods of increased irrigation frequency, to assist with establishing and maintaining the trials. We had significant color extending all the way into the end of October again this year. We are continually working on our plant culturing (e.g., spacing and irrigation practices) to provide the most practical, recommended, and optimal growing conditions.

Our annual Industry Field Day, was held on Tuesday, August 5, as a part of the Colorado Destination Days (<https://agsci.colostate.edu/hortla/colorado-destination-days/>). We had a great turn out, with over 250 industry and horticulture professionals attending and assisting with evaluations--even with the scorching temperatures.

After decades as a staple in the Colorado Horticulture Industry, Hardy Boy Starts and Welby Gardens closed operations in 2025. We extend a heartfelt thanks and appreciation to the Gerace Family for all of their support over the decades at the CSU Trial Gardens.

Every year, the gardens attracts thousands of visitors and we continually receive positive feedback from people. We cordially invite you to visit the gardens and enjoy the color and ambiance of a place that is like no other in Colorado.

See you out in the 2026 Trial Gardens!

TRIAL GARDEN MISSION AND PURPOSE

Our mission is to provide education, research and outreach to students, community members, industry professionals and anyone else with a desire to learn.

The purpose of the flower trial garden is to evaluate the performance of flower varieties under our unique Rocky Mountain environmental conditions. Our growing conditions are characterized by high altitude, intense solar radiation, drying winds, severe hailstorms, large fluctuations between day and night temperatures, season-long need for irrigation and heavy clay soils. Plants are evaluated based on plant vigor, uniformity, floriferousness and tolerance to environmental and biotic stresses. Performances of these varieties are judged by selected students, faculty, industry representatives, public horticulturalists and advanced Master Gardeners. A summary of these evaluations will be published in a Garden Performance Report at the end of the season so that the information can be put to use by the horticulture industry, as well as the public. The report will be distributed at the end of the season to all participating companies. The trial results will also be available to the public online at www.flowertrials.colostate.edu.

PLANT EVALUATION

Data Collection and Methods

Ground bed: A representative plant from the replicates was selected for data collection.

Containers: The container as a whole (all replicates planted in the container) was used for data collection.

Data Collections: July 10 and August 18

- **Plant Height:** measured from ground or container media level to tallest part of plant.
- **Plant Width:** two measurements averaged from one measurement of widest and one perpendicular to the first measurement.

Vining or trailing plants in containers were noted as appropriate for container evaluations.

Flowering Performance

Data Collections: Regular basis; every 14 to 21 days

- Data presented reflects average of all surviving plants
- Flowering data ratings based on the following scale
 - 1 = plants not in bloom (0%)
 - 2 = a few flowers present across the planting
 - 3 = significant amount of flowers present (~50%)
 - 4 = mostly in flower across planting (~75%)
 - 5 = plants in full/peak bloom (~100%)

PLANT EVALUATION

Industry Evaluation Day: August 5, 2025

- About 250 horticulture industry professionals, trial garden employees, advisory members, university affiliates, and Master Gardeners evaluated entries.
- Evaluators were assigned to rate about ~100 entries
- Evaluation data collected digitally (~50 used paper evaluations)
- Each evaluator provided ratings based on the following criteria:
 - **Overall Rating** (1 = very poor performance; 5 = excellent)
 - **Plant form and quality** including *vigor, uniformity, foliage health, branching, sturdiness, etc.*
 - **Flowering** including *size, uniformity, flower presentation, flowering capacity, color stability, color balance in mixed plantings, etc.*
 - **Other considerations** including *fragrance (flowers or foliage), disease/pest damage, novelty, etc.*

“Best Of” Winners & “Other Outstanding Plants” Selection

- Ratings from all evaluators on August 5th field day were averaged
- Top five in each class (class was designated by having at least 10 entries for the genus or type of plant species) were identified
- Subcommittee of Trial Advisory Board and University representatives met on September 3 to review the top five and verify the top rated entries in selecting the **“Best Of”** winners.
- **“Best of Show”** was selected from one of the class winners
- **“Other Outstanding Plants”** were selected based on committee review and plant performance over the growing season.

Coleus	TerraScape 'All That Jazz'	Kientzler	Sun	Cutting	4.17	[3] Unique Colors, [4] Vigorous Plant, [8] Great Foliage, [8] Uniform Much shorter than last year, still nice! I love the asymmetrical leaves and subtle yellow making it tricolor.

The colors seem a bit too cool for lava, but other than that, the cascading effect is great (personally I wish it was stronger). Love that it moves like lava when there is a breeze.
Coleus	TerraScape 'Midnight Majesty'	Kientzler	Sun	Cutting	4.58	[3] Unique Colors, [8] Uniform, [9] Great Foliage, [9] Vigorous Plant Beautiful dark color. Bold color. Looks like it shimmers.
