Colorado State University

2020 Perennial Trial Garden

Performance Report

Dr. James E. Klett, David Staats and Rebekah Savage

Introduction

Dr. James E. Klett is the faculty coordinator for the Annual and Perennial Flower Trial Gardens. In 2000, the annual trial garden was moved from its site at PERC (Plant Environmental Research Center) to the park located at the corner of Remington and Lake Street. The relocation of the annual garden to this more spacious and visible site furthered its mission by more effectively extending education, research and outreach to students, home gardeners, Master Gardeners, community members, and Green Industry personnel. In 2007, the Perennial Trials were created in response to increased interest in new perennial cultivars. The Perennial Trials are located directly across the street to the east from the Annual Trial Garden in front of the University Center for the Arts. It is managed by staff from the CSU Department of Horticulture and Landscape Architecture with substantial oversight from the Perennial Trial subcommittee which is part of the Annual Flower Trial Garden committee. Each entry must have been introduced within the past three years and is evaluated for three complete years and two winters to determine hardiness and consistent landscape performance.

The purpose of the trial garden is to evaluate the performance of herbaceous perennial plant species and cultivars under our unique Rocky Mountain environmental conditions. Our growing conditions are characterized by high altitude, intense solar radiation, drying winds, severe hailstorms, large fluctuations between day and night temperatures, and a season-long need for irrigation. Plants are evaluated for plant vigor, uniformity, floriferousness, and tolerance to environmental and biotic stresses. Data (ratings and photos) were collected twice a month (June to September). Plants were also evaluated once a month by some members of the Perennial Trial subcommittee. The Perennial Trial subcommittee met November 20th, 2020 to review data and photos to vote on which entries should be designated a “Top Performer” for the class of 2018.

The project is mostly funded by the entry fees collected from the plant breeding companies and perennial propagators who have chosen to participate in the trials. Additional financial assistance and supplies for the trial operations are donated by a number of sources. These sources include individuals, various foundations, nurseries, greenhouse growers and plant and seed production companies from across the nation. The trial garden at Colorado State University receives no operating dollars directly allocated from state funds. Some operational and staff dollars have come from the Colorado State Agricultural Experiment Station, Extension, the College of Agricultural Sciences, and the Department of Horticulture and Landscape Architecture.

Acknowledgements

The Department of Horticulture and Landscape Architecture at Colorado State University would first like to thank the many plant and seed companies who continue to participate in the trials year after year. Without their cooperation and support, the research done at the trial garden would not be possible. This year, the following 25 plant and seed companies participated in the trials, entering 117 new varieties of herbaceous perennial plants for a total of 272 entries in the trials:

Creek Hill Nursery	Must Have Perennials
Danziger	Pacific Plug and Liner
Darwin Perennials	PanAmerican-Kieft Seed
Dummen Orange	Pioneer Gardens
Eason Horticulture Resources	Plant Select®
Flamingo Holland	PlantHaven International, Inc.
GardenChoice	Skagit Horticulture
Green Fuse Botanicals	Star® Roses and Plants
HilverdaFlorist	Stonehouse Nursery, LLC
Hilverdakooij	Sunfire Nurseries
J. Berry Nursery	Syngenta Flowers
Jelitto Perennial Seeds	Terra Nova Nurseries, Inc.
	Walters Gardens/Proven Winners

We would like to recognize several companies that have donated supplies to the program. Thanks are extended to GreenCare Fertilizers, Inc. for donating the water soluble fertilizer used in both the greenhouses and the garden. We would like to thank Tagawa Gardens, Gulley Greenhouse, and Pindstrup, for donating the potting media for all the vegetatively propagated plants grown in our greenhouses. Thank you to Everris, Inc. for donating the slow release fertilizer that was used in the ground beds. Thank you to Organix for donating organic media to amend newly established ground beds. And thanks to Brown’s Greenhouse for growing all seed propagated perennial plants at a substantially reduced cost to the trial.

The Department of Horticulture and Landscape Architecture would like to recognize and thank the following people for making the trial gardens happen this year.

The Annual Trial Garden Staff – Lauryn Schriener, Emily Gritters, Basil Blume, Sarah Mendus
All the Larimer & Weld County Master Gardeners and Bev Shaw who volunteered their time and hard work.

The Trial Garden Advisory Committee –Dan Gerace (Welby Gardens), Al Gerace (Welby Gardens), Diana Reavis (Eason Horticultural Resources Inc.), Duane Sinning (Colorado Department of Agriculture), Galen Dokter (Vaughns), Gene Pielin (Gulley Greenhouse), Jim Devereux (Green-Fuse Botanicals), Milan Clickingbeard (Tagawa Greenhouses), Karl Trellinger (Syngenta Flowers), Bridget Blomquist (Denver Botanic Gardens), Mark Seguin (Sakata Ornamentals), Ron Brum (Ball Horticultural Company), Amy Gonzales (Syngenta Flowers), Susan Stauber (Ball Horticultural Company), Traicer Gray (Elitch Gardens), Julie Lehman (Denver City Park Greenhouse), Richard Anderson (Tech Center Landscape), Brian Austin (Dutch Heritage Gardens), Diana Shull (Dummen Orange), Holly Shield (Denver City Parks), Steven Engel (PanAmerican Seed), Beth Gulley (Gulley Greenhouse), Kathy

McKay (Schoneveld and Flamingo Holland), Sean Moody (Ceres Landcare), David Hartley (CSU Emeritus), Veronica Scadden (Petals Boutique Floralscapes), Stephanie Guterrez (Designs By Stephanie), Aaron Bivens (Altman Plants), Bridget Blomquist (Denver Botanic Gardens), Chris Berg (Dummen Orange), Dale Kiyota (Kiyota Greenhouses), David Gartner (Tagawa Greenhouses), Debra Pfaff (City and County of Broomfield), Emily Mason (Dummen USA), John Navant (Hyland Hills Park and Recreation District - Water World), Nora Lozada (Michells), Ryan Giacoimin (Brown's Greenhouse), Sara Metcalf (Plantorium), Scott Fulton (Botany Lane Greenhouse), and Shalene Hiller (City of Westminster).

And a special thanks to those who served on the Perennial Trial Sub-Committee - Aaron Bivens from Altman Plants, Bridget Blomquist from Denver Botanic Gardens, Ron Brum and Susan Stauber from Ball Horticultural Company, Dan Gerace from Welby Gardens, Beth Gulley and Gene Pielin from Gulley Greenhouse, Sean Moody from Ceres Land Care, Richard Anderson from the Denver Tech Center, Diana Reavis from Eason Horticultural Resources, Shalene Hiller from City of Westminster, Kathy McKay from Schoneveld and Flamingo Holland.

Perhaps most importantly, much thanks and appreciation goes to the Perennial Trial Garden staff at the university that has worked diligently to prepare and maintain the garden. These people include:

Horticulture Research Associate
Perennial Trial Coordinator

David Staats
Rebekah Savage

An Invitation

You are cordially invited to tour the garden at your leisure to enjoy the color and ambiance of a place that is like no other in Colorado. Any suggestions you may have for future programs or improvements are strongly encouraged, so please feel free to contact us with your ideas.

Jessica Davis – Department Head
Phone: (970) 491-7018

Cultural Data¹

Growing

Vegetative propagated plants did not arrive all at the same time or at the same growth stage. All of the new entries were planted in the garden in May and June. Most vegetative varieties were received as plugs and transplanted into 4" pots shortly after arriving at Colorado State University. They were planted into the garden when they established well in their pot. Seed entries arrived in early June and were planted directly into the garden.

Fertilization in the Greenhouses

Dosatron[®] fertilizer injectors rated at 7 GPM were used in the greenhouses to fertilize plants at every watering. GreenCare 14-4-14 water soluble fertilizer was used. They received fertilization at a rate of 200ppm. All plants were grown in the greenhouses at the CSU Horticulture Center, with the exception of the seed varieties which were grown at Brown's Greenhouse.

Chemicals Used in the Greenhouses

Banrot[®] (6 oz/gallon) and Rootshield[®] (0.5 tsp/gallon) was applied to all plugs immediately after arrival and prior to potting.

Soil Amendments and Preparation

All beds were raked clean of dead plant material and weeds prior to planting. Newly established bed areas were amended with media donated by Organix.

Planting

Plants were grown in highly amended beds (see soil analysis table). Entries were planted in beds that corresponded with their preferred sun or shade requirements. Beds were fertilized (see fertilization section for details) and new bed areas were tilled prior to planting new varieties. Planting holes were prepared by hand or auger to the correct depth for root ball prior to planting.

Bed Spacing

Entries were planted in the ground based on estimated mature plant size and how many were sent. Generally, plants were spaced at one foot centers with one row of nine plants. If fewer plants were sent they may have been planted at wider spacing. There were approximately 18 inches between entries in the beds.

Watering

All beds in the trial garden received the same water amounts. An irrigation audit was conducted at the beginning of the season to determine the irrigation rate per bed. This rate was used to calculate the

¹ No endorsement of products named is intended nor is criticism of products not mentioned.

total length of time to irrigate each bed. Plant beds were watered with 1.0-1.5 inches per week depending on the amount of natural precipitation received and newly planted varieties received more initially. The irrigation was sometimes adjusted as needed to make sure plants were not stressed.

Fertilization in the Garden

After planting, Osmocote® (17-5-11) was applied to all beds at the rate of 6 grams/sq. ft. (suggested medium rate on label). GreenCare water soluble fertilizer (20-10-20) was dispensed through a 100 GPM Dosatron® twice a week at a rate of 200 ppm.

Maintenance of Flowers

All flowers were deadheaded as needed to give a clean appearance and encourage secondary blooming. Most plants are cut back to the ground in late fall or early spring.

Weed Control

Herbicide applications were applied along the edge of beds on a as needed basis. Otherwise, all weeding was done by hand throughout the season inside garden beds.

Pest Control in Garden

Aphids became a problem on several Hellbore varieties and were sprayed with Marathon insecticide on June 10th. Leucanthemum and Rosa varieties also had aphid problems and were sprayed August 17th with PyGanic.

Disease Control in Garden

There were no major disease problems in the garden this year, so no chemicals were used for disease control.

Dates of Severe Weather

Some notable weather was a hailstorm on June 8th, however the storm caused no significant damage to the perennials. Summer of 2020 set a record for the most days above 90° F. An extremely early snow on September 8th left 4" of snow on plants and affected some aesthetics with lodging but not much frost damage.

Monthly Temperatures and Precipitation for Winter 2019-2020

Month	Average Maximum Temperature	Average Minimum Temperature	Precipitation (Inches)
October	59.7	29.9	0.94
November	50.5	25.5	1.79
December	45.5	21.7	0.57
January	44.2	17.4	0.4
February	46.6	20.5	0.69
March	54.7	27.7	1.29

Monthly Temperatures and Precipitation for Summer 2020

Month	Average Maximum Temperature	Average Minimum Temperature	Precipitation (Inches)
April	62.2	35.1	1.71
May	71.1	44.1	2.55
June	80.4	52.2	1.33
July	86.5	57.9	0.15
August	84.0	56.3	0.48
September	75.9	47.1	1.39

Data Collection Methods

Plant Size

Height and width measurements are taken once toward the end of the growing season. This is done to determine the approximate average size and growth performance of the mature plants. For plants that were planted in 2020, their height and width were taken to get a feel for how their first season growth performance was. For consistency in bed data collection, the third plant from the front of the left row is measured; however, if that plant is noticeably smaller or larger than average, an alternate plant is selected for measurement. Measurements are taken at the highest and widest parts of the plant, including any flowers.

Soil Samples

Numerous samples were taken from individual ground beds on August 7th, 2020 and were combined into a single sample and submitted to the CSU Soil Testing Lab. The results are as follows:

Soil Analysis

Location	pH	E.C. mmhos /cm	Lime Estimate	% OM	NO ₃ -N ppm	P ppm	K ppm	Zn ppm	Fe ppm	Mn ppm	Cu ppm	Texture
Perennial Beds	7.4	0.1	Low	11.2	7.9	586	545	71.1	459	16.0	19.2	Sandy Loam

Performance Evaluation

Photos and data on plants and flowers were collected on a bi-weekly basis from May to early October. Dead plants in the trial were not considered in the bi-weekly evaluation; thus, the ratings given only reflect the live plants. Members from the Perennial Trial subcommittee also came and wrote comments for each plant in June, July, and August. Plants and flowers were rated 0-5 using the following scale:

0 = Dead/No flowers

1 = Poor: Plants are very sick or dying, extremely few flowers

2 = Below Average: Plants are unattractive in some form, i.e. – leggy growth habit, chlorotic or low vigor, flowers are few and occurring sporadically

3 = Average: Plant appearance with growth characteristics that would be expected for the time of season; flowers would be few but uniform across the plants

4 = Good: Plants look attractive (foliage, growth habit, etc.); flowers are blooming strong and showy

5 = Excellent: Plants are very healthy and uniform; flowering is impressive

Selection of “Top Performers”

On November 20th, 2020, a conference call was convened with CSU staff and the Perennial Trial Garden Subcommittee. Pictures of entries from the 2018 planting were posted to the Perennial Trial website for review. Data from the growing season was compiled and emailed to each evaluator prior to the conference call for review. After discussion and looking at the pictures taken throughout the season, each plant was voted on by each member of the committee as to whether it should be awarded the designation as a “Top Performer”.

“Top Performers” for 2020 Season Class of 2018 Grown 3 Summers and 2 Winters

1. **Allium ‘Summer Beauty’** (*Allium lusitanicum*) from Stonehouse Nursery, LLC
Soft lavender blue flowers were prolific and had strong flower power later in the summer. Flowers were relatively tall and held above foliage for maximum show but had good structure and did not lodge. Plant were uniform and very attractive with glossy, green flat leaf blades.
2. **Echinacea ‘Sombrero® Tres Amigos’** (*Echinacea x hybrida*) from Darwin Perennials
Flowers were unique with an “evolution of color” that results in about three different shades of burgundy. Blooms were vibrant with a rich saturated color. Abundant flowers remained in bloom a long time and created an impressive overall show. Plants had a good growth habit with strong branching and no disease.

3. **Penstemon 'DAKOTA™ Burgundy'** (*Penstemon digitalis*) from Terra Nova Nurseries
Dark burgundy foliage was a key reason for the superior rating. The dark leaves had multiple shades of burgundy added interest and help make the white/lavender flower color really stand out. Blooms are very prolific with a long flowering period. It was noted that although the flowers are very impressive, the plant looks very showy even when not in flower due to the attractive dark foliage that remained clean all season and never had got “floppy ear”. Plants were very reliable and had 100% survival over three seasons.

4. **Phlox 'Ka-Pow®' series** (*Phlox paniculata*) from Darwin Perennials
Evaluators were impressed with the entire series as all had similar height, were very uniform and resistant to powdery mildew. Flowers had a long period of bloom with no color fade. Series had a range of colors that went from soft lavender to a vibrant pink. The pink entry was noted to have some shades of coral which is unique to Phlox.

5. **Salvia 'Blue by You'** (*Salvia nemerosa*) by Darwin Perennials
Vibrant blue flowers were very showy with prolific amounts of blooms early in the season and an impressive repeat later in the season after a hard cut back of old blooms. The unique blue color is a great addition to the pallet of *Salvia* colors in the trade and evaluators said they “had to go see it” from across the garden.

Entries that Failed to Overwinter

Some plants had extreme winter losses but if at least one plant survived though the winter they were included in the data even if it died out later in the season. Plants listed below are varieties that had a zero percent survival rate for the 2019-2020 winter.

Genus	Cultivar or Trade Name	Company	Year Planted
Agastache	Sunrise™ Blue	Green Fuse Botanicals	2018
Agastache	Sunrise™ Orange	Green Fuse Botanicals	2018
Agastache	Sunny Sparks™ Pink	Danziger	2019
Caryopteris	Pavilion™ Pink	Danziger	2019
Caryopteris	Gold Crest	Darwin Perennials	2019
Coreopsis grandiflora	Castello™ Pompon Yellow	Syngenta	2019
Coreopsis grandiflora	SunSwirl	Dümmen Orange	2019
