FORT LEWIS SCHOOL OF AGRICULTURE
MECHANIC AND HOUSEHOLD ARTS
HESPERUS, COLORADO

The Fort Lewis School

of

Agriculture, Mechanic and Household Arts

Hesperus, Colorado

The Fort Lewis School, located at Hesperus, Colorado, is under the direction of the State Board of Agriculture and is a part of the Agricultural College system of Colorado.

The officers of the Board are:

Hon. A. A. Edwards, President.....Fort Collins, Colo.
 Hon. E. M. Ammons, Vice President.....Denver, Colo.
 Hon. L. M. Taylor, Secretary.....Fort Collins, Colo.

FACULTY

Chas. A. Lory, M.S., LL.D., D.Sc., President.....Fort Collins, Colo.
 George F. Snyder, M.S. Principal.....Hesperus, Colo.
 Ernest H. Bader, B.S.....Instructor in Agriculture-Farm Manager
 Fred A. Jones, B.S.....Instructor in Science and Mathematics
 C. C. Brooks, B.A.....Instructor in History and English
 Rose Erwin.....Instructor in Household Arts Subjects
 Mason E. Knapp, B.S.....Instructor in Animal Husbandry & Shop
 Joan A. Morse.....Instructor and Stenographer
 Leon R. Quinlan, B.S.....Experimental Work

SCHOOL CALENDAR

Registration of Students... Oct. 9, 1922; Jan. 8, April 9, July 9, Oct. 8, 1923
 First Term of Winter Session.....Begins October 9, 1922
 Thanksgiving Recess.....November 20, 1922
 Christmas Vacation.....December 22, 1922, to January 2, 1923
 Final Examinations--First Term.....January 3, 4, 5, 1923
 Second Term Begins.....January 8, 1923
 Lincoln's Birthday.....February 12, 1923
 Washington's Birthday.....February 22, 1923
 Final Examinations--Second Term.....March 27, 28, 29, 1923
 Graduation Exercises.....March 30, 1923
 Spring Vacation.....March 31 to April 9, 1923
 First Term of Summer Session begins.....April 9, 1923
 Decoration Day.....May 30, 1923
 Final Examinations--First Term.....June 27, 28, 29, 1923
 Fourth of July Vacation.....June 30 to July 8, 1923
 Second Term begins.....July 9, 1923
 Registration for Six Weeks Review School.....July 9, 1923
 Six Weeks Review School Closes.....August 18, 1923
 Labor Day.....September 2, 1923
 Final Examinations--Second Term, Summer Session.....September 25, 26, 27, 1923
 Graduation Exercises.....September 28, 1923
 Fall Vacation.....September 29 to October 8, 1923
 Registration--First Term, Winter Session.....October 8, 1923

Location and Environs of the Fort Lewis School

The Fort Lewis School is located near the foot of the La Plata mountains on an extensive reserve of 6,400 acres of agricultural, timber, and coal land owned by the state. Flowing through the reserve is the La Plata river, lined with stately cottonwoods and pines, contributing to the attractions of the valley and supplying from its liberal store, water for irrigating the crops on the reserve. The altitude is 7,600 feet and the climate is delightfully invigorating and healthful. Pure water, abundant sunshine, fertile fields, the best of Nature's playgrounds for recreation, all combine to make Fort Lewis a most healthful and pleasant place in which to pursue an education.

The nearest railroad station is at Hesperus, five miles north of Fort Lewis, on the Rio Grande Southern Railway. Durango, the county seat of La Plata County, is fourteen miles east of Hesperus.

Although the majority of the students come from this district, enrollment is by no means limited to them, students from all over Colorado, and from other states being eligible. Indeed, students from these sections are coming to Fort Lewis in increasing numbers each year, attracted by the agreeable, healthful climate, the scenic beauties of the district, as well as by the educational facilities of the school.

Courses are offered in Agriculture, Home Economics, and Teacher Training.

Buildings

There are twenty-one large buildings on the campus; convenient in arrangements, lighted by electricity, and supplied with running water. They include the school building, two boys' dormitories, girls' dormitory, dining hall, shops, power house, gymnasium, dairy buildings, residences, barns, and storehouse. The school building, dormitories, dining hall, office, shop and gymnasium are all steam heated.

All of the Twenty-one Campus Buildings Are Well Equipped

Recent Improvements

The new dormitory for the boys will be ready on October 6, 1922. It will be a model of neatness and convenience, well lighted, sanitary, steam heated, supplied with shower rooms, and a large recreation and reading room with a cheery fireplace. The beds are arranged for outdoor sleeping with warm, individual rooms in which to dress and study. The building is of brick, with a metal roof.

Gymnasium

The gymnasium is a splendid one and adds much to student life at the institution. The snow may be deep all around but the gymnasium is a warm, comfortable playhouse at all times.

Life at Fort Lewis

Because of the isolation of the school, life at Fort Lewis is in many respects more wholesome and conducive to profitable study than at other institutions. The students and faculty live virtually as one big family, and there are none of the undesirable distractions the proximity of a town so frequently supplies.

Nor is there any lack of diversions and recreation. The neighboring woods and mountains offer enticing nooks for picnics and expanses for hikes; there are tennis tournaments, basketball, baseball games and athletic field days; there is a student dance once a month, frequent parties, meetings of the Ammons Literary Society, and other forms of entertainment.

The Power House and Engine Room Afford a Good Laboratory for Students of Mechanic Arts

Our Boys' Basketball Team is a Strong One

The boys' basketball team made the best record yet made by a Fort Lewis team. Nearly all members of the first team will return next winter, and the second and third teams are strong, so we expect an unusually fine showing.

Clean moving pictures are frequently used on Friday or Saturday evenings.

Students have breakfast at 6:45 and assemble in the classrooms and shops from 7:30 to 8:00. Dinner is served at 12 o'clock, and supper at 6. At 7:15 the students gather in the assembly hall, where they pursue their studies under the supervision of one of the instructors. They are dismissed at 9:15 and the lights are extinguished at 10:00.

Opportunity to Earn While at School

It is possible for a number of students to work out a portion of the cost of board. Boys earn from one to twenty-five dollars a month and girls from one to eighteen. Students are expected to do the assigned work well.

The Experimental Gardens Furnish Vegetables for the Table Most of the Time

Clothing

Boys: The boys are expected to wear olive drab uniforms with regulation army hats and shoes. Uniforms, shoes and hats may be ordered through the School.

Girls: The girls are expected to wear modest blue serge skirts and blouses. The dresses and gymnasium suits should be ordered through the School.

Table Provided With Best Meats, Vegetables and Dairy Products

No matter to what idealistic heights the pursuit of knowledge takes us, the cravings of the inner man always accompany us, and we must come down to the commonplace subject of eating. Nothing is left to be desired in this respect at Fort Lewis. Students and instructors take their meals at a central dining room where are served home-butchered pork and beef, fresh vegetables from the garden, butter, cream, milk and buttermilk, fresh from the school's own dairy. The school is largely self-supporting from the standpoint of food.

Enrollment

Do not fail to make formal written application on an enrollment card or by letter as soon as possible. Give reliable references.

Students who have done unsatisfactory work in the past should not plan to enter on October 9, 1922, unless their applications have been accepted by the principal of the school.

Graduation

Students are graduated after the completion of the four years of work.

Experimental Work

More experimental work is being done this year on the preserve. The work with field peas is particularly extensive. In addition to the experimental work with peas, corn, potatoes, oats, barley, wheat, alfalfa, grasses, clovers, strawberries, raspberries, apples, cherries, plums, etc., we are trying many varieties of head lettuce this year. Farmers find that good head lettuce, cauliflower and early potatoes bring in a considerable income before the regular farm crops are ready for market.

DESCRIPTION OF COURSES***Agriculture***

Field Crops and Crop Raising (First and Second Year).—Five periods a week for 24 weeks. Text—Wilson and Warburton. A study of wheat, corn, oats, barley, rye, and other cereals, forage crops, alfalfa, grasses, potatoes, sugar beets and other root crops. The judging, selecting, testing and care of seeds of the different useful plants, also the different plant diseases and pests and how to treat or eradicate them; the best cultural methods, the best methods of caring for harvested crops, and other useful facts concerning the crops grown on the farm are taught.

Stock Judging (First Year).—Three double periods a week for twelve weeks. Text—Purdue University Bulletin No. 29 and other texts. This is a study of the typical forms and characteristics of different types of farm animals. Animals are brought before the classes and the students apply the information gained from texts and instructors in pointing out the desirable and undesirable qualities of each.

Breeds of Farm Animals (First Year).—Five periods a week for twelve weeks. Text—Types and Breeds of Farm Animals, Plumb. This is a study of the characteristics of the various breeds of farm animals. The school is fortunate in having pure-bred Percherons, Herefords, Holsteins, Oxfords, Rambouillets, Duroc-Jerseys, in addition to good grade cattle and horses. One hundred fine stereopticon slides are available for class use.

Botany (First Year).—Five periods a week for twelve weeks. Text—Practical Course in Botany, E. E. Andrews. A study of the seed and the resulting plant and flower.

The School Livestock is Used for Practice in Judging

One of the Best Animals at the School

Horticulture (Second Year).—Texts in vegetable gardening and fruit growing are used. A study of the best vegetables to grow at high altitudes is made, together with the best soil, water and cultural conditions. Some time is given to the plant and insect enemies of vegetables and to the best methods and conditions of storage. During the second term fruit growing is pursued. The best planting and cultural conditions for strawberries, raspberries, currants, gooseberries and hardy tree fruits are studied. Insect pests and how to destroy them are given much attention. Attention is also given to packing, marketing and storing fruit.

Diseases of Farm Animals (Third Year).—Five periods a week for twelve weeks. Text—Common Diseases of Farm Animals, Craig. Instruction is given in the care of farm animals, how to properly care for them and guard against disease, and thus secure the best growth or greatest degree of usefulness. Also, how to recognize the common diseases, and how to nurse the afflicted animals. Special attention is given to hygiene and farm sanitation.

Soils (Third Year).—Seven periods a week for twelve weeks. Text—Soils and Soil Fertility, Whitson and Walster. Fee, fifty cents a term. A study of plant food, preparation of the soil, physical conditions of the soil that affect soil productivity, systems of rotation, manures and commercial fertilizers and similar topics are pursued.

Stock Feeding (Third Year).—Five periods a week for twelve weeks. Text—Feeds and Feeding, Henry and Morrison. The value of the different crops as feed for animals is studied and balanced rations for various classes of farm animals are then worked out.

Farm Management and Farm Accounts (Third Year).—Five periods a week for twelve weeks. A study of the business of farming: Why farm, cost of farming, hired help, tenants; diversified and specialized, intensive and extensive farming, size of farm, capital, equipment, cropping system, marketing and farm records and accounts.

Dairying (Third Year).—Five periods a week for twelve weeks. In the dairy laboratory the students are taught the use of the Babcock tester, the lactometer, the moisture test for butter, the methods of handling milk and cream, the running and testing of various cream separators, ripening cream, churning, working, salting and printing of butter. The practical work is supplemented by lectures on composition of milk, care and use of milk and cream, separating and butter making.

Animal Breeding (Third Year).—Five periods a week for twelve weeks. The law of heredity, variation and reversion, the principles of pure breeding, line breeding, in-breeding, cross-breeding, and grading up are taught under this head. The principle points to be observed in the practice of breeding, such as are incidental to selection and mating of stock, are emphasized.

Mathematics

Arithmetic (First Year).—Five periods a week for twenty-four weeks. Text—Harvey's Practical Arithmetic, Book II. Drill upon the four fundamental operations, factoring, lowest common multiple, tests for divisibility of numbers, common and decimal fractions, mensuration, denominate numbers with tables, United States land survey, standard time, longitude and time, percentage, profit and loss, commission and brokerage, taxes, trade discount, simple interest, bank discount, proportion and square root, measurement of hay, cisterns, silos and land. Much of the work in Arithmetic will be based upon practical farm problems arising from daily field work.

Algebra (Third Year).—Five periods a week for twenty-four weeks. Text—Wells and Hart. The fundamental operations: Factoring, fractions, simple equations, radicals and quadratics are studied.

Geometry (Fourth Year).—Five periods a week for twenty-four weeks. Text—Wells' Plane Geometry.

Irrigation and Leveling (Second Year).—Two periods a week class work and six periods a week field work. The purpose of this course is to give actual practice in the use of the tape, compass, rod and level in solving such practical problems as measuring and determining land areas, finding the difference in elevation between two points, and surveying for the grade line of a ditch. Studies are made in the measurement of water. Drainage and general irrigation problems are discussed. Practical and useful methods of taking field notes and recording other data are taught.

Science

Physiology and Hygiene.—Five periods a week for twelve weeks. A study of the proper sanitary conditions that should surround school and farm houses, with special reference to sources of domestic water supply and the disposal of refuse. Physiology is studied for a good foundation for the work in hygiene and in home nursing.

Physics (Fourth Year).—Three hours of class or recitation work and four hours of laboratory work per week for twenty-four weeks. Text—Practical Physics, Milliken and Gale (Revised). A study is made of simple machines, pneumatics, hydrostatics, heat, light, sound and electricity and their application to every-day problems. Fee, \$1.50 a term.

Chemistry (Second Year).—Three hours class and four hours laboratory a week for twenty-four weeks. Text—Practical Chemistry, Black and Conant. After studying the fundamental principles of pure chemistry, the application of chemistry to the farm and home life is taken up. The chemical properties and values of foods, and the chemical changes and effects due to cooking and baking are studied. The elements affecting plant growth and soil fertility are studied, and the value of manure and commercial fertilizer taken up. Fee, \$2.00 a term.

Mechanic Arts

Farm Mechanics (Second Year).—Five periods a week for twenty-four weeks. Text—Davidson and Chase. A study of farm machinery and motors. The underlying principles of farm machines of various types, a detailed study of these machines and their care is made. The various forms of power available for farm use, such as windmills, gas engines, steam engines, water wheels and electric motors are studied and compared.

In Our Chemistry Laboratory

Farm Shop Work.—Ten periods a week for twenty-four weeks. Materials that are used by students in making exercises for their own use will be charged to them at a cost in addition to the fee. This course has been designed to give actual work with the tools and problems that are common on every farm. Farm Wood Working will take up a part of the time. Rope Splicing, Harness Repairing, and Farm Metal Work are exercises which will take up a portion of the time. Every student who takes farm work must know how to sharpen and care for the tools, and he should learn what tools are essential on the farm. This is one of the strongest courses in shop work that has ever been offered at Fort Lewis. Fee, \$5.00 per year.

English and Literature

First Year.—Five periods a week for twenty-four weeks. Text—Reed and Kellogg's English Grammar. A study of the essentials of English Grammar and Elementary Composition. For the boys the work in composition consists largely of reports, outlines and descriptions of their field work.

Second Year.—Five periods a week for twenty-four weeks. Text—Progressive Course in English for Secondary Schools, Stebbins. A study of the correct forms in writing and speaking. Letter writing, written and oral compositions are given particular attention.

Fourth Year.—Five periods a week for twenty-four weeks. This is a course in English and American literature in which the major portion of the time is given to the study of British and American authors and their writings.

Civics

Third Year.—Five periods a week for twelve weeks. This is a course of training in citizenship and a study of local, county, state and national government.

History

U. S. History (Second Year).—Five periods a week for twenty-four weeks. Text—School History of the United States, Mace. Particular attention is paid to the history of Agriculture and industrial development in the United States and to the methods of teaching history.

General History (Fourth Year).—Five periods a week for twenty-four weeks. Myers' General History is used.

Economics

Fourth Year.—Five periods a week for twelve weeks. Text—Elements of Political Economy, by Laughlin.

Geography

Political and Physical (First Year).—Five periods a week for twenty-four weeks. Texts—Essentials of Geography, Brigham and McFarlane, Second Book. Much attention is given to map study, industrial geography and methods of teaching geography.

Domestic Science

Hand Sewing (First Year).—Lectures are given in the selection and use of materials, methods of making and use of thread, needles, thimbles, and tape measures; instruction is given in the different kinds of stitches, seams, hems, buttonholes, patching, darning and care of clothing. Fee, \$2.00.

Machine Sewing (First Year).—The training in hand work followed by directions in the care and use of sewing machines and the making of simple garments or articles for the house. Fee, \$2.00.

Dressmaking and Millinery (Second and Third Years).—Ten periods a week for twelve weeks. The covering and lining of a simple frame, the sewing of braids, and the making of wire frames are taught; also a few of the useful stitches in embroidery, with suggestions for their combination and application. Each girl cuts out and makes two dresses, one of washable material, and the other of woolen material. Students are taught how to fit garments, also the careful finishing of seams, hems, and plackets. Fee, \$2.00.

Cooking (First Year).—Ten periods a week for twelve weeks. The courses in cookery include a study of foods, together with explanation of the reasons for certain practices in cooking, practical lessons in plain cooking, knowledge of fuel and the use of kerosene and coal ranges. Neatness, system and speed (together with quietness), are strongly emphasized in the practice work of the students. Fee, \$2.00.

Advanced Cooking and Serving of Meals (Second Year).—Ten periods a week for twelve weeks. The study of the relative value to the body of different food nutrients, the planning and serving of meals suitable to varying conditions. Fee, \$2.00.

The House and Household Management.—House plans, house furnishings, sanitary consideration in heating, lighting and ventilation of houses, the water supply, disposal of household wastes, care of the house in general, the keeping of accounts, the week's routine, selection and care of supplies are studied.

Laundry.—The students are taught the use, cost of, and care of laundry equipment, of various soaps, washing powders, bluing and starches. Practice is given in removing stains and in the laundering of such linens and garments as are found in the washing of the average household.

Pedagogy

Theory and Practice (Third Year).—Five periods a week for twelve weeks. Good text books, dealing with the problems of instruction, drill, testing, review, methods of assigning lessons, calling on pupils and teaching the elementary school subjects are studied.

Special Methods (Third Year).—Five periods a week for twenty-four weeks. The best methods of teaching reading, arithmetic, language, writing, spelling, geography and history are studied, discussed and illustrated.

School Management and School Law (Third Year).—Five periods a week for twelve weeks. A study of the physical environment of the pupil, general sanitation, the teacher, his preparation and his relation to the school board, parent and pupil, the school program, incentives to study, examinations, promotions and moral training. Five weeks are given to study of the school laws of Colorado.

Regulations

The use of tobacco is not permitted.

Students must not have fire arms in their possession.

All students meet at the central study hall at 7 o'clock each evening for study, entertainment, attendance upon literary or other programs.

No student will be excused from attending day and evening meetings at the schoolhouse unless a written request, with reasons for desired absence from meeting, is filed with the principal, or in case of sickness, of which the principal has been advised.

There must be no games going on when a public meeting is in progress at the schoolhouse.

No man or boy may go to the girls' dormitory to call upon a girl there when an instructor is not present.

Under certain conditions boys may call at the girls' dormitory to visit on Saturday evening, Sunday afternoon and Sunday evenings, when there are no meetings in the schoolhouse and when there is an instructor present.

When the lights "blink" all students must go to their respective rooming places.

No student may go off the campus without having made satisfactory arrangements with the principal of the school or the matron of the dormitory. Students should have permits from home to go to town.

Fees and tuition must be paid for the six months in advance. Board and room must be paid for one month in advance. There will be no refund for board for an absence of a day or two. There will be no refund for room rent so long as the room is held, and no reduction in fees and tuition to those who come late or leave before the close of school.

Regular transportation charges are made for taking students and others to and from Hesperus and Durango or other places.

No student will be graduated from the Teachers' Course who does not hold a county teachers' certificate, or if too young to actually receive a certificate, the equivalent grades secured as a result of a county teacher's examination.

Young men who wish to come to the school to visit students must first secure permission from the principal.

THE FORT LEWIS SHORT COURSE*For High School Students, Teachers and Others***JULY 9 TO AUGUST 18, 1923**

The course is designed for those who wish to secure credits that will be accepted at the Fort Lewis or the Colorado School of Agriculture, in Colorado High Schools and for those who wish to take the county teachers' examinations.

Special classes under special teachers are organized, provided there have been at least four applications for the subject BEFORE July 1.
